

RUMBABY

The small stone to stone melanger develops the concept of stone refining being equipped with stone wheels and granite basement.

The possibility of removing the bowl makes the cleaning of the machine and the recovery of the product easier, reducing waste.

The rotation of the wheels (and not of the tank) guarantees compliance with CE regulations (about moving parts).

Like the larger Rumbo, there is the supply of forced hot air up to 75 ° C.

The entire process allows to reach particle size up to 20 μ).

The electronic board is equipped with an ethernet port, for future network connections and remote control.

Through the PLC and its touchscreen it is possible to save different RECIPES (working parameters) and adjust the speed of the wheels, air heating, wheels reversal, the refining and resting time (dedicated settings).

TECHNICAL FEATURES:

- Touchscreen electronic card with ethernet port
- Fully removable mixing bowl
- Granite basement and wheels (about 5 kg each)
- Adjustable wheels speed
- Process control plexiglass lids equipped with safety microswitches
- Forced ventilation with adjustable temperature up to 75 ° C
- Processing tank capacity: up to 13 kg useful per batch

SPECIFICATIONS:

- Machine mounted on wheels
- Dimensions: 550 x 546 x 720 (h) mm
- Weight: 100 kg
- Installed power: 2.3 Kw
